### Notice:

To gain the maximum performance from the Z2 Laser mouse, please read the user guide carefully before installation.

Designed specifically with FPS (First Person Shooters) in mind - The Z2 Laser mouse has been designed from the ground up to deliver lightning fast response and mirror smooth tracking. Driverless in game Resolution switching allows for pin point accuracy and maximum control.

### End Result = M.F.R (Maximum Frag Rate)

### 3 Program Button

Z2 mouse has two "quick launch" buttons that can be programmed using the supplied software. Default Setting is "PAGE UP / PAGE DOWN".

### Trouble Shooting

I do not see the laser light when the mouse is active.

- Unlike traditional optical mice, the light is not visible when the laser mouse is active.
- To make sure the mouse is on and functioning properly, move the mouse back and forth and check to see if the cursor responds.

My mouse does not work on a mirror.

- Though rated for most of these kinds of surfaces, occasionally there will be one such surface that will cause the mouse to work improperly or not at all.
- If you are using the mouse on a reflective or mirrored surface, move it to another surface.

**Nuf said - Now go pwn some n00bs!**

### Using your mouse

Your mouse uses a new technology-invisible laser module that provides incredible tracking ability. Z2 Laser mouse provides approximately 20 times the tracking sensitivity of a conventional optical mouse.

### 1. So, what makes the Z2 different?

### High Resolution Comparison

### 2. Features and benefits

#### 1 Speed Button 'S'

The SPEED button allows the user to switch resolutions on the fly and / or during gameplay.

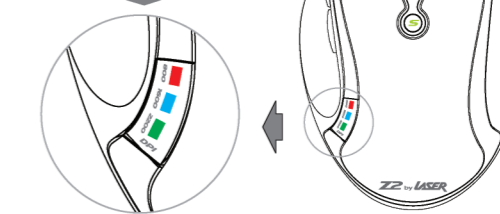

Press Speed Button 'S' once and the Blue LED will illuminate, indicating 1600DPI resolution.

Press Speed Button 'S' again and the Green LED will illuminate, indicating 2200DPI setting.

Pressing Speed Button 'S' again will return the mouse to the default setting of 800DPI.

\*\* All functions above can be used circularly.

3 Coloured LEDs indicate the speed status
